The following cleanroom wiping technique is recommended for cleaning horizontal surfaces. We advise wiping from critical areas to less critical areas.

1. Create a quarter-folded wipe by folding the wipe in half then in half again.

2. If desired, use a squeeze bottle to saturate the wipe with disinfectant.
   NOTE: Not required for presaturated wipes.

3. Hold the quarter-folded wipe at open edge, between thumb and forefinger.

4. Pull wipe across surface to be cleaned placing equal pressure across the edge of your hand.

5. Lift the wipe at the end of each stroke, then unfold and re-fold wipe exposing clean surface before beginning new stroke.

6. Wipe in one direction from most critical to least critical areas of the surface, lifting the wipe at the end of each stroke, flipping and re-folding wipe before next stroke. Slightly overlap each stroke to ensure complete coverage of the surface.

7. Dispose of used wipe.

This guide is for guidance only, site protocols and procedures should be followed at all times.
